JOURNAL OF PROTEIN CHEMISTRY—Volume 10, 1991

Journal of Protein Chemistry is an international journal devoted to the publication and communication of original research work in all aspects of investigations concerned with the elucidation of the molecular basis for protein function. The journal places equal emphasis on all facets of protein activity (e.g., enzymes, hormones, protein antigens, antibodies, receptors, etc.). Since approaches to function are meaningful only with detailed knowledge of structure and are equally based on innovations or applications from a diversity of organic and physical chemistry approaches, the journal also publishes original articles dealing with protein structure (covalent or three-dimensional), reactions of functional groups, protein conformation, and peptide synthesis. To ensure maximum effectiveness and full accessibility to all investigators, the journal does not levy a page charge and emphasizes rapid publication of accepted manuscripts. Reports may be submitted as either regular papers or brief communications. All manuscripts are subject to review by referees who are experts in their fields. The referees' recommendations determine the acceptability of submitted manuscripts. The majority of reports are published as regular papers. A regular paper constitutes a complex piece of work that contributes significantly to the understanding of a particular problem. The work should be described concisely but in sufficient detail to permit experimental confirmation by other interested investigators. Brief communications constitute manuscripts based on observations that are considered timely and, accordingly, their rapid dissemination will be beneficial to the advancement of the field. These manuscripts should be no more than four printed pages and are assured publication in the next issue after acceptance. They are judged by the referees on the basis of not only scientific merit, but also fulfillment of the requirement for urgency.

EDITOR-IN-CHIEF

M. Zouhair Atassi, Baylor College of Medicine, Houston, Texas

ASSOCIATE EDITORS

Lawrence J. Berliner, The Ohio State University, Columbus, Ohio
Panayotis G. Katsoyannis, City University of New York, New York, New York
Harald Tschesche, Bielefeld University, Bielefeld, Germany

BOOK REVIEW EDITOR

Mendel Friedman, U.S. Department of Agriculture, Albany, California
